

Redesigning the Shopping Cart Experience: A UX-Centric Approach to Reduce Abandonment

“Shopping should be a joy, not a chore.”

I remember adding a pair of shoes to my cart, only to abandon it when the final price shot up due to hidden fees. This led me to dig deeper into why people, like myself, hesitate at checkout. It turns out, I'm not alone—70% of shoppers abandon their carts, as highlighted in research from [NNG Group](#).

After analyzing industry research and exploring user behavior patterns, I have reimagined the shopping cart experience—a simplified, engaging, and conversion-friendly checkout flow that removes friction and improves user trust.

Understanding the Shopping Cart Challenges:

The shopping cart is the final step before a purchase, yet it is often the place where customers abandon their intent. Through my research, I identified several key pain points that drive users away:

1. Unexpected Costs at Checkout:

The Problem: One of the biggest dealbreakers is seeing unexpected shipping costs, taxes, or additional fees pop up at the last step. It creates a sense of dishonesty and makes users feel tricked.

According to [NNG Group](#), transparency in pricing can reduce abandonment rates significantly.

2. Complicated, Lengthy Checkout Process:

The Problem: Many e-commerce platforms still use multi-step checkout flows, requiring too many clicks and unnecessary form fields. If a checkout process takes more than a minute, users will bounce.

3. Forced Account Creation:

The Problem: Users dislike being forced to sign up just to complete a purchase. For first-time buyers, this adds an unwanted barrier and often results in abandonment.

4. Poor Mobile Experience:

The Problem: Mobile shopping accounts for over 60% of e-commerce sales, yet many websites are still not optimized for small screens. Small buttons, broken layouts, and slow load times drive users away.

[Adobe's report](#) emphasizes the need for mobile-first design in e-commerce.

5. Security & Trust Issues:

The Problem: Many users hesitate to enter payment details due to security concerns. If a site looks unprofessional or untrustworthy, users will abandon their cart—even if they really want the product.

6. Slow Loading Pages:

The Problem: Every extra second a page takes to load increases abandonment. Slow sites cause frustration, especially on mobile.

Strategy for a Better Shopping Cart Experience

To fix these common issues, I have developed a new checkout flow that emphasizes:

- Speed – No unnecessary steps or distractions
- Simplicity – A one-page checkout with intuitive design
- Trust – Security badges, customer reviews, and transparent pricing
- Mobile-First Approach – Touch-friendly design and fast loading

1. Frictionless One-Page Checkout

Instead of a multi-step checkout, my design places all necessary fields in a single, well-organized layout. Users can:

- Enter shipping & payment details without navigating away
- See their total cost in real-time
- Use a progress bar to understand where they are in the checkout process

2. Smart Payment Options & Autofill

To make checkout seamless, I have:

- Enabled express checkout via Google Pay, Apple Pay, and PayPal
- Implemented autofill features for shipping & payment fields
- Allowed card scanning for quick entry

3. Exit-Intent Triggers & Abandonment Recovery

If a user tries to leave the cart, they will receive:

- A reminder popup with a limited-time discount
- A cart reminder email/SMS if they abandon their cart
- A notification if an item in their cart goes on sale

4. Trust-Building Elements

To boost confidence, I added:

- Trust badges (SSL, Verified by Visa, McAfee Secure)
- User reviews & testimonials on the checkout page
- A clear return/refund policy

Redesign of E-commerce site :

I've Redesigned shopping web site Temu.

Home page before:

Home page after :

Before: Original Home Page

1. Cluttered Navigation Bar

- The navigation bar was packed with too many text links, making it overwhelming and difficult to use.
- Important features like voice search or dropdown menus for categories were missing, forcing users to manually scroll through multiple sections.

2. Oversized Banner Section

- The promotional banner dominated the page, pushing other valuable sections like deals and product recommendations further down.

3. Inconsistent Product Cards

- The product cards were poorly structured, with inconsistent sizes and layouts.
- Trust elements like ratings or sales numbers were either missing or not highlighted enough, leaving users unsure about product quality.

4. Underwhelming Deals Section

- The deals section was visually plain and lacked elements that drive urgency, such as countdown timers or progress indicators.
- The placement felt uninspiring and didn't immediately catch the user's attention.

After: Redesigned Home Page

1. Streamlined Navigation Bar

- The navigation bar now includes dropdown menus for easier browsing of categories, reducing visual clutter.
- A new voice search option makes finding specific products quicker and more user-friendly.

2. Optimized Banner Section

- The banner size has been slightly reduced, allowing more visibility for deals and other sections below.

3. Uniform Product Cards

- Product cards now have a clean and consistent design, with equal sizes and well-organized details.
- Key trust signals, like "Top Rated" badges and the number of items sold, are prominently displayed, building user confidence in products.

4. Engaging Deals Section

The new "Lightning Deals" carousel features countdown timers, adding urgency and encouraging users to act quickly

Before : checkout with sign-in only

Before: The original checkout process only allowed users to sign in, creating a barrier for those unwilling to create an account.

After : checkout as Guest

A guest checkout option has been added, allowing users to quickly proceed with their purchase without needing to sign in, making the process more flexible and user-friendly.

Shopping cart page before:

The original shopping cart page displayed an unorganized layout with less emphasis on important elements like the order summary and checkout button, which were not visually distinct. It also lacked clear guidance on minimum order requirements for free shipping or discounts.

Shopping cart page after:

The redesigned cart page highlights the order summary with a visually distinct section, uses a green "Checkout" button for better visibility, and includes clear prompts for minimum order requirements to qualify for additional discounts or free shipping, creating a more user-friendly experience.

The checkout page lacked clarity and incentives, with payment methods scattered and no option for flexible payment plans like "Order Now, Pay Later." It felt overly transactional and less user-centric

The updated checkout page features a clean layout with clearly displayed payment methods and includes an "Order Now, Pay Later" option, making the process more flexible for users. It also highlights rewards for completing the order, a prominent "Submit Order" button, and secure payment indicators, creating a more engaging and user-friendly experience.

Conclusion:

In the fast-paced world of e-commerce, a seamless and intuitive shopping cart experience can be the difference between a sale and an abandoned cart. By addressing challenges like hidden fees, forced account creation, and lack of clarity, my redesign prioritizes user trust, convenience, and engagement. The addition of features like a one-page checkout, guest options, and dynamic incentives not only simplifies the process but also builds lasting customer relationships. E-commerce is not just about transactions—it's about creating experiences that turn shoppers into loyal advocates
